

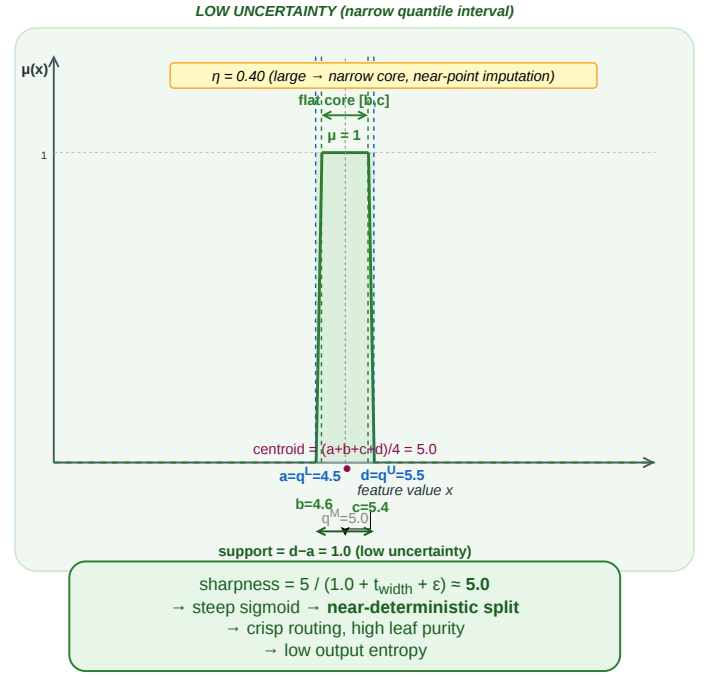

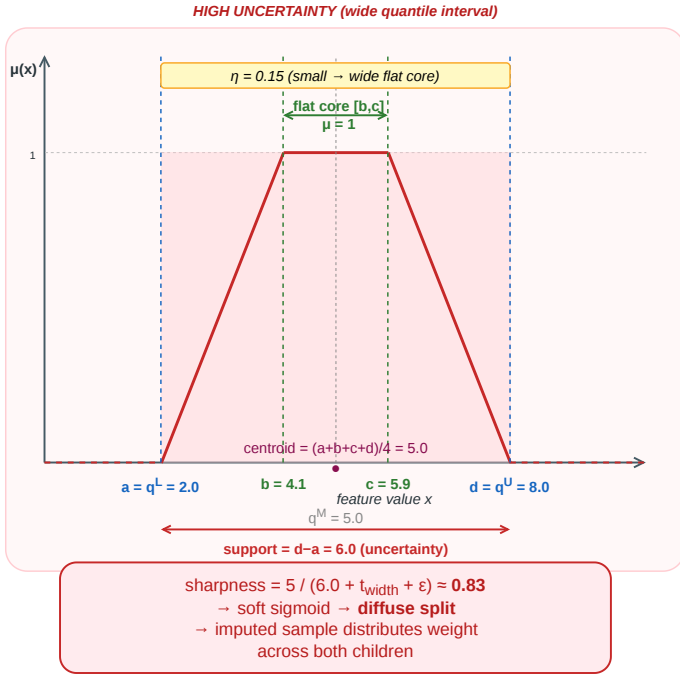

Figure 2 — Proportional Fuzzy Transformation (Phase 2)

Trapezoid construction (Phase 2 equations):
 $a = q^L_{ij}, d = q^U_{ij}, b = \max(a, q^M - \eta \cdot (q^U - q^L)), c = \min(d, q^M + \eta \cdot (q^U - q^L))$, centroid = $(a+b+c+d) / 4$, uncertainty = $d - a$
 sharpness = $5 / (\text{uncertainty} + t_{\text{width}} + \epsilon)$

Left: $q^L=2.0, q^M=5.0, q^U=8.0, \eta=0.15 \rightarrow (a,b,c,d)=(2.0, 4.1, 5.9, 8.0)$, uncertainty=6.0, sharpness=0.83 $\rightarrow$ diffuse routing
 Right: $q^L=4.5, q^M=5.0, q^U=5.5, \eta=0.40 \rightarrow (a,b,c,d)=(4.5, 4.6, 5.4, 5.5)$, uncertainty=1.0, sharpness=5.0 $\rightarrow$ deterministic routing
